A strong background in chemistry and mathematics has driven a career in molecular spectroscopy. Beginning with microwave spectroscopy of organometallic compounds, his Ph. D. work involved measurement and analyses of highly precise rotational transition frequencies of molecules in cold molecular beams. At JPL he has recorded and analyzed millimeter and submillimeter spectra of both astrophysical and atmospheric molecules while incorporating state-of-the-art hardware and software to the spectrometer. He has participated in seven field campaigns for deployment of submillimeter instruments onboard stratospheric balloons. He is responsible for measurements of molecular line-shape parameters for earth science sensing and astro-chemicals. He has built a field ready THz spectrometer for in-situ gas sensing. He is the currently the primary contributor to the JPL spectral line catalog used throughout the spectroscopy and remote sensing communities.
